Press Release – November 26th, 2026

Allego Secures Record Green Financing Package of up to €720 Million to Accelerate European EV Charging Expansion

Allego, Europe's leading independent EV charge point operator, has successfully closed a new green financing package of up to €720 million, consisting of a €370 million refinancing facility, an accordion term facility of up to €250 million, and a guarantee facility of up to €100 million.

The transaction represents the largest financing package ever secured by a European charge point operator, providing Allego with competitive, long-term funding and the financial flexibility to support its significant development pipeline and continued network expansion.

The significantly oversubscribed financing also introduces an important innovation in the European EV charging industry with a dedicated guarantee facility partially underwritten by the insurance sector. For the first time, a financing structure of this scale combines traditional bank financing with substantial surety capacity, broadening the range of institutions supporting the development of charging infrastructure across Europe.

This structure reflects growing confidence from financial markets in Allego as one of Europe's leading and most established EV charging operators.

Active across 13 European countries and operating more than 32,000 charging points, including more than 5,500 ultra-fast charging points, Allego has built one of Europe's most extensive and diversified charging networks. Its network combines AC, DC, and ultra-fast charging infrastructure across highways, retail destinations, hospitality venues, and cities. Through long-term partnerships with leading infrastructure and retail operators, including VINCI Autoroutes, APRR, Euro Rastpark, REWE, Esso, Burger King, Van der Valk, and IKEA, Allego continues to strengthen its position as the trusted partner for both site hosts and electric vehicle drivers across Europe.

As Europe accelerates its transition to electric mobility, Allego remains focused on delivering reliable charging infrastructure at scale. Allego has been a pioneer in ultra-fast charging and has achieved approx. 20% annual growth in energy sold over the past three years, with revenue reaching approx. €225 million and EBITDA more than doubling. In 2025 alone, the company enabled approximately 1.71 billion electric kilometres and contributed to the avoidance of approximately 307,800 tonnes of CO_2 emissions, supporting its mission to accelerate sustainable mobility across Europe.

Backed by this long-term financing and its majority shareholder, Meridam, Allego is well positioned to continue expanding its network, supporting EV adoption across Europe and creating long-term value for customers, partners and financial stakeholders.

###

About Allego
Allego has been making EV charging reliable and accessible for drivers and businesses across Europe since 2013. With more than 32,000 charging points in 13 countries, we help them drive electric with confidence. Drivers' needs are at the heart of what we do: charging should be simple and fit seamlessly into everyday life. By making electric driving easier, Allego accelerates the transition to zero-emission mobility.
